

Kerry Walker CV

Kerry Walker

Chester, UK · Remote-first [LinkedIn](#) | [GitHub](#) | kerrywalker.uk

Profile

Senior C#/.NET Software Engineer and Team Lead, 18 years in .NET, mostly on software that already existed and mattered to someone: holiday park management systems, analytical software used by UK police forces, security and access control. The park systems are an accounting product underneath, which is where the double-entry ledgers, invoicing and UK VAT under the statutory apportionment schemes come in. Specialisms in performance, legacy modernisation, system integration and AI-assisted development. 1st Class BSc in Computer Science, after a first career in electrical engineering.

Four things that keep coming up

- **“It’s too slow to even demo.”** Cut a core import from several hours to under 5 minutes on a one-million-row dataset, unblocking a product that shipped after 5 years in development.
 - **“Nobody wants to touch this old system.”** Modernised across the whole .NET lifecycle: VB6 to .NET, .NET Framework to .NET 9, desktop to Blazor web, safely and incrementally.
 - **“We need these two systems to talk.”** Built integrations across five very different fields: payment gateways, CRM, EPOS, hospitality platforms and hardware devices.
 - **“We want to move faster with AI.”** Built AI-assisted development workflows with Claude Code: automated code review, AI test generation and custom internal-tool integrations.
-

Skills

Core: C# | .NET 9 / .NET Core / .NET Framework | Blazor | Azure | SQL Server | Entity Framework Core **Integration & APIs:** REST | gRPC | SOAP | OAuth / OpenID Connect | payment, CRM & EPOS integrations **Domain:** UK VAT and accounting software | double-entry nominal ledgers | invoicing and settlements **Specialisms:** Performance

Experience

Software Developer / Team Lead, ParcVu Systems (Remote) | 2024 to Present

- Lead a team of 4 building a .NET 9 Blazor platform used by more than 75 UK holiday park operators; revived a stalled project and shipped its first release with CI/CD delivering every 2 weeks.
- Wrote the large majority of the integration with a major European hospitality platform, including the invoice and ledger-account layer that maps posting rows, with their VAT rates and nominal codes, into the partner's accounting model.
- Work across the accounting core: double-entry ledgers, nominal codes, invoicing, statements, cash matching and UK VAT under the statutory apportionment schemes.
- Delivered a gRPC + IdentityServer4 OAuth migration and introduced an AI-assisted development workflow with Claude Code.

Software Developer, Forensic Analytics (Remote) | 2021 to 2024

- Built and optimised analytical software used by most UK Police forces and several international law-enforcement agencies.
- Cut core data import from several hours to under 5 minutes on a one-million-row dataset, unblocking a launch after 5 years in development.
- Migrated .NET Framework 4.6 to .NET 5, re-architected the application and database to UTC, and raised automated test coverage.

Software Developer, ParcVu Systems | 2014 to 2021

- Led the company's first move from desktop to web: chose Blazor and built the reusable framework the team still builds on. Reused the existing backend rather than copying it, so the accounting and VAT code stayed one shared implementation serving both the desktop and the web front end.
- Delivered multiple integrations: Salesforce (the largest), SagePay Cloud payments via REST, and a Zonal EPOS integration (REST and SOAP).
- Managed an 80GB post-merger database reconciliation across 10 years of divergent schema; became secondary product owner.

Software Developer, Potts Mullarkey | 2011 to 2013

- Designed a credit-card processing system integrating two major payment gateways for card-not-present and Chip & PIN payments.

Software Engineer, Remsdaq | 2010 to 2011 & 2013 to 2014

- Developed a WPF security & access-control platform (CCTV, intruder detection, access control); integrated multiple third-party video systems, delivered ONVIF camera-discovery R&D and a SALTO integration over a custom TCP protocol.

Application Developer, Triangle Software | 2008 to 2010

- Turned around several failing projects; rebuilt a VB6 system handling £1M+ per week in BACS transfers, and cut a transport-industry printing job from days to seconds.
-

Education

BSc Computer Science, 1st Class · University of Chester (2004 to 2007) **BTEC HNC, Electrical & Electronic Engineering** · NEWI Deeside
